Connecting Android Phones to WiFi

Changes to the Android OS required extra network security for WPA2 Enterprise WiFi networks. This just means there are a few more steps to connect to RBB-Staff WiFi with and Android phone. Please follow these instructions to get connected.

1. Open settings
2. Tap on connections
3. Tap on WiFi
4. Tap on RBB-Staff
5. For EAP method select PEAP
6. For Identity, type your network username
7. For Password, type your network password
8. For CA certificate, select Use system certificates
9. If there is a field for Anonymous identity, make sure to clear out any text.
10. For domain, type nps1.rbbschools.net
11. Tap connect and you're good to go

You phone will now connect to RBB-Staff WiFi wherever it is broadcasted on campus.
